Your Comments:

The end result of any clean up plan for the pollution in the Portland Harbor superfund site should be that fish in the lower Willamette are safe to eat, for humans and wildlife. And this status needs to be achieved within, at the most, a 10-20 year time frame. All cleanup plans should follow from this overriding goal.

The draft cleanup plan will not accomplish this goal and is therefore completely inadequate. It falls far short of an acceptable response to dangerous pollution in the midst of our community

Please create a cleanup plan that will lead to the removal of the fish consumption advisory within 10-20 years and will truly restore our river to health.
